

Urban Transport Directorate

No. :UTHS/09/Policy

Date-22.05.2024

Subject: - Minutes of Meeting held 22.05.2024 in the Conference Hall of UT.

A meeting of Committee of Criteria for Oscillation Trial of Metro Rolling Stock was held on 22.05.2024 at UT Directorate for review of some issues as per agenda items.

The following officials were present in the meeting –

S.No.	Designation	Name
1.	PED/R&T	Sh. H.K. Raghu
2.	PED/RS	Sh. Dinesh Shukla
3.	PED/Infra-I&II	Sh. Sanjay Kumar Srivastava
4.	ED/EMU	Sh. Gaurav Mathur

Issues raised by Metros through letters and correspondences with Urban Transport Directorate and Deliberations:

1. Periodicity of Interim Speed Certificate:

Issues: Metros have requested for higher period of validity of Interim Speed Certificate by RDSO as the existing validity period is 5 years considering the Rail and Wheel wear in the Metro system is very less and does not reach to prescribed limits even after 10 years of services.

Deliberations: Criteria Committee members have discussed this issue and are of the opinion that 5 years validity of Interim Speed Certificate (ISC) is appropriate and not require any change. Six month before completion of the 5 years of functioning of Metro, Metro authority shall give the details regarding the Rail and Wheel wear in the prescribed format and seek the extension of Interim Speed Certificate or propose for fresh oscillation trials for issuances of the Final Speed Certificate (FSC) in terms of para 6 of '*Criteria for Oscillation Trial of Metro Rolling Stock*' (Rev.3, May 22).

2. Definition of System:

Issue: The word "Metro System" mentioned in para 2.1 of Criteria of Oscillation Trial for Metro Rolling Stock may be elaborated. Metro authorities are not clear regarding the word "Metro Systems":

Deliberations: Committee has deliberated on this issue and clarifies that one Metro System consists of DBR, SOD, Annexure-A, B, C1 & C2, D1 / D2, E1 & E2 of '*Procedure for Safety Certification and Technical Clearance of Metro Systems*' for particular geographical location/city. If all these documents are same, it will be treated as one system.

If any of the above document is changed or the geographical location/city of Metro establishment changes, it will be treated as different system and the approval of document other than the already approved under same Metro administration will be required. The detailed oscillation trials are required to be conducted of the Rolling Stock with different Metro System for issuing Interim speed certificate.

In terms of Rule 28 of *The Railways (Opening for Public Carriage of Passengers), Rules, 2023*, the New/Derived Rolling Stocks are defined as given below:

(a) A rolling stock will be treated as 'New' stock, if

- (i) Larger principal dimensions are varying $>5\%$.
 - (ii) Infringement is more than the earlier rolling stock.
 - (iii) The designed axle load is varying $>2\%$.
 - (iv) Maximum designed track loading density is having variation of $>2\%$.
 - (v) The basic design of the bogie is different.
 - (vi) The braking system is different.
 - (vii) Different kind of system of operation/propulsion system.
 - (viii) Maximum speed is more than the earlier tested rolling stock.
- With similar type of stock already running in the same category (Trainset/Multiple units/Coaches/Locomotive)

(b) All other vehicles are treated as derived. Derived vehicle can be exempted from oscillation trial if.

- (i) Bogie design is same
- (ii) Braking system is same
- (iii) Propulsion system is same
- (iv) Maximum speed is same
- (v) Change in axle load up to $+2\%$, -(within range of empty and loaded condition of similar stock.
- (vi) Change of TLD (track load density) up to $+2\%$, -100%
- (vii) Change in unsprung mass up to ~~$\pm 5\%$~~ $\pm 5\%$.
- (viii) Change in principal dimensions up to $+5\%$, -2% (within MMD)
- (ix) change in Center of Gravity up to $+2\%$, -10% with respect to any similar stock within same category already running over Indian Railways provided there is no change in suspension system or no change in bogie design affecting the riding behavior of rolling stock.

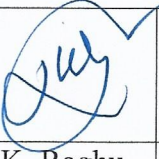

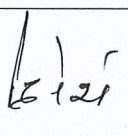

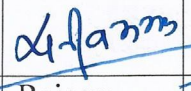

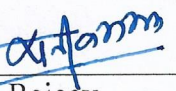

3. Provisional Speed Certificate (PSC) periodicity for Departmental Rolling Stock:

Provisional Speed Certificate of Departmental Rolling Stock is issued by RDSO based on the evaluation of design documents and the Schedule of Dimensions. Validity of this Provisional Speed Certificate at present is 5 years, which is appropriate. Provisional Speed Certificate is to be issued for maximum speed of 25 kmph and if any Metro is desirous of getting the speed increased for this departmental vehicle, they have to approach RDSO with the request for oscillation trial and issue of Interim Speed Certificate for the departmental vehicle also. This Provisional Speed Certificate may be

Sanjay

15/12/21

extended based on the revised current data of Rail and Wheel wear provided the maintenance conditions remains same and a certificate from the Rolling Stock Engineer of the concerned Metro that vehicle is being maintained in good condition as per the original design.
